The feline AB blood group test is designed to detect specific genetic variants that result in blood types B and AB. The absence of those variants is reported as N.

In most cases, the N allele corresponds to the common, unchanged gene that results in blood type A. However, occasionally, one or both N alleles may correspond to a rare and yet unknown AB and/or B type allele. Since these are unknown, there is no way to test for them.

The table below shows the resulting blood type for each possible genotype reported.

Genotype	Blood Type
N/N	Most likely A
N/c	Most likely A
N/b1	Most likely A
N/b2	Most likely A
N/b3	Most likely A
c/c	AB
c/b1	AB
c/b2	AB
c/b3	AB
b1/b1	B
b1/b2	B
b1/b3	B
b2/b3	B
